**To place the order please use Quick Order Form**

**Air Tracks PUMP & JUMP** are inflatable tracks distinguished by excellent quality and moderate prices. Due to refined manufacturing technology and high quality of materials used, **Air Tracks PUMP & JUMP** are airtight and durable.

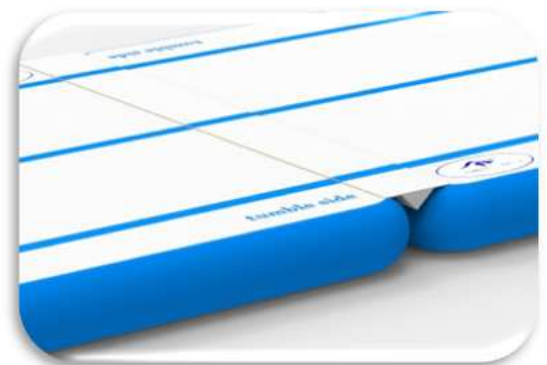

The pumping takes no more than several minutes.

They may be applied in many different ways, from high-performance trainings, through various types of gymnastic exercises, to dance clubs, fitness clubs or Gymnastics for All.

After deflating they occupy little warehouse space.

### Optional supplementary products:

- Trolley Lift
- Carrying Handles
- Carrying Bag

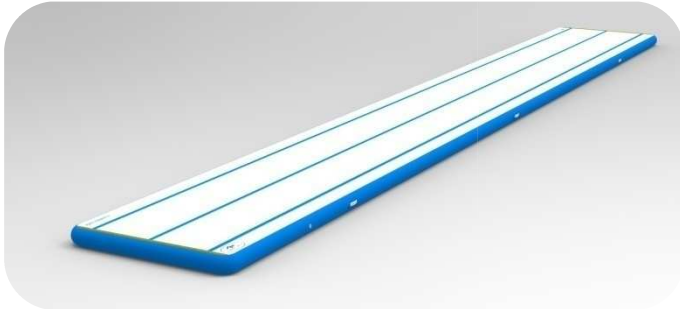

**Air Tracks PUMP & JUMP** may be connected in two ways, using special Velcro straps.

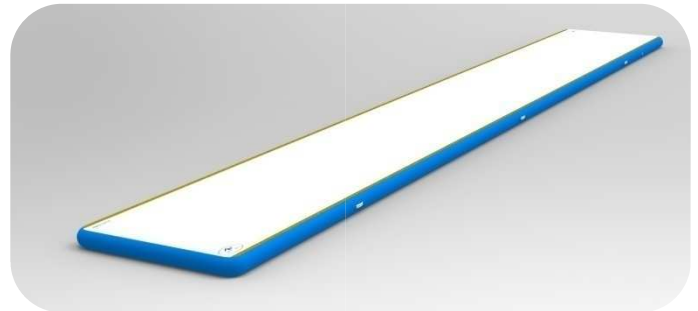

On *Acro Side* we may connect two or more tracks at long sides. In this way a gymnastic floor may be created out of several tracks.

In turn, the *Tumble Side* is prepared for connecting the tracks at short sides. That's how one longer track may be constructed out of two shorter ones.

Such a solution allows dividing the shopping for equipment into several stages, according to budget possibilities and increasing needs of a club

Tumble Side - 2 velcro stripes (soft part) on short sides and 3 marking lines according to FIG rules

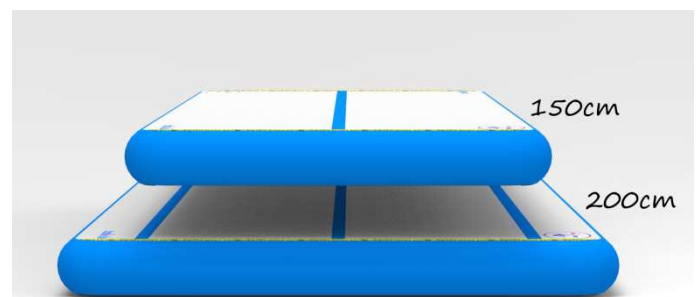

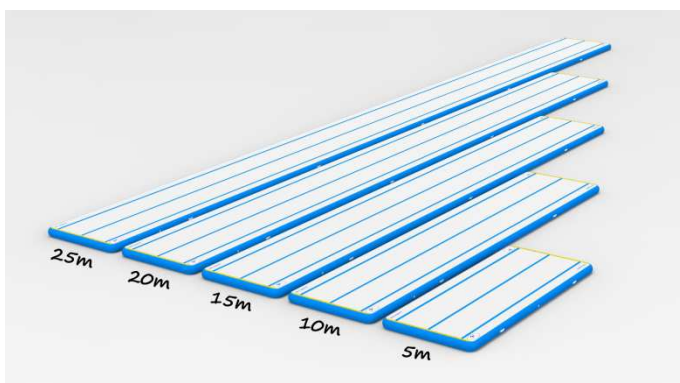

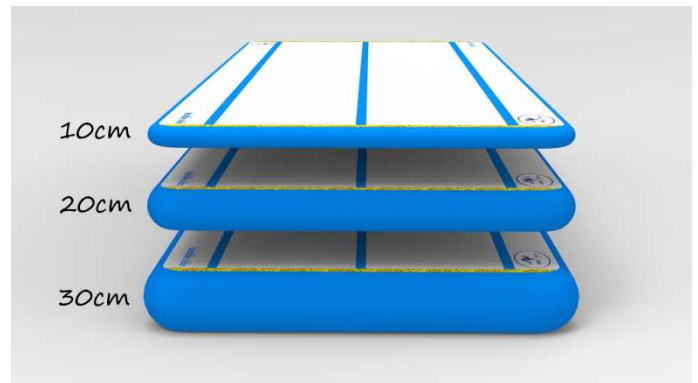

Acro Side - 2 velcro stripes (soft part) on long sides
